## Final actions of the project

- Upload files and folders.
- Open and play the files uploaded (images, videos, audios).
- Search files by name and also extension name.
- Navigate through all the folders created from the initial path.
- Delete files.

## What lessons you've learned during this project

In this project we learned to manage files with php, different functions, how to apply ajax with php to send data, use injected html and use new libraries such as "Data table", to display the information tables.

## How you have organized and distributed the tasks

Most of all the tasks and parts of the project we have done together with peer programming by video call.
