Final result of the project

Case diagram

What lessons you've learned during this project

We have learned a lot in this project, and much more than the last ones because we started a new programming language, which had a few differences from the previous ones.

In general we learned about:

- General use of PHP
- The use of the global variables
- Use of the keys
- Working with files and folders
- Use form

What problems have you encountered when developing this project?

We have a lot of problems during the project, cause it was hard for us the start of this new language. the things with which we had more problems have been:

- Editing files
- Deleting files
- Show the information of the files
- Display on the screen the files and the folders.

How you have organized and distributed the tasks
